

Plugin *UserDefaults*

Documentation

Date of Release	09.03.2015
Document-Version	1.0
Plugin-Version:	1.1.0 and above
Author:	Oskar Truffer, studer + raimann ag

Changes

Version 1.0, 09.03.2015

otx

- created

Introduction

The plugin allows to configure some default settings for newly created users with certain attributes. You specify a user defined field (UDF) and a value and what attributes should be assigned users matching the description given in the UDF.

2.1 Supported ILIAS-Versions

The plugin supports ILIAS 4.4 – 5.1.

Feature Overview

PL-Version	Changes
------------	---------

Installation

```
mkdir -p Customizing-global-plugins-Services-EventHandling-EventHook-  
cd Customizing-global-plugins-Services-EventHandling-EventHook-  
git clone https://github.com/studer-raimann/UserDefaults.git
```

Go to Administration -> Plugins. And install the Plugin.

Configuration

Click on configure on the UserDefaults Plugin in Administration -> Plugins. Click on "Create new Setting". Define your defaults and save. Click on Actions -> Edit UDF Checks on your newly created User Default. Configure on which users the defaults shall apply in the future. Save and activate the default.
